BARBELL

FEATURE CATALOGUE · NOVEMBER 2026

FOR GYM OWNERS

One connected system for your members, your trainers and your business.

Barbell gives every member a personal training and nutrition app, gives every trainer a full picture of their roster, and gives you the numbers, controls and tools to run the gym. All of it on one shared, live record.

Client

Training, nutrition, progress and community in one mobile-first app.

Gym Owner

Members, revenue, staff, the gym floor and growth from one dashboard.

Trainer

Every client's data, programming tools and early warnings in one place.

FOR EVERY MEMBER

The Client app

What every member gets on their phone: a training and nutrition app that follows their coach's plan and leaves room to make it their own.

73
client features

Available now: included and working Available with setup: needs a provider account or key

JOINING & FIRST RUN

- **Join with the gym's sign-up code**: new members land in the right gym automatically
- **Onboarding wizard**: six quick questions about body, goal and experience build personal calorie and macro targets
- **Guided app tour**, replayable at any time

HOME & DAILY GUIDANCE

- **Today at a glance**: session, calories and macros, burn, goal progress, gym crowd, community
- **Customisable Home**: show, hide and reorder every card
- **Coach Brief**: today's priorities from the member's own logged data
- **Smart reminders**: workout today, tomorrow's session, unfinished session, rest day, meals, water and a daily recap
- **Device notifications** while Barbell is open in the background
- **Reminder controls**: per-type switches, water interval, recap time, quiet hours

TRAINING

- **Today's Training**: the assigned program serves the right session each day
- **Progressive-overload targets** on every lift, from last session's numbers
- **Live workout session**: timer, set-by-set reps and weight, add sets and exercises, auto-save and resume
- **Effort rating** and a calorie estimate shown as a range
- **Automatic personal records**: heaviest weight, estimated 1RM, best set volume
- **Session recap** after every workout
- **Build today**: create your own session from the exercise library
- **My workouts** planner with a weekly schedule
- **Log a past workout** with date, times and effort
- **Cardio and sports**: 40+ activities, live or logged after
- **Training history** and a full day-by-day record
- **287-exercise library** with muscles, equipment and animated visuals
- **Share a workout** as a link that others can import
- **My PRs** and per-lift strength trends

NUTRITION

- **Today's Fuel**: calories left, macros, planned meals and logs
- **Type a meal in plain words**, with Indian portions understood: katori, roti, piece
- **Speak a meal** in supported browsers
- **21,000+ food database** (Indian, international and packaged) with portion and cooking-oil choices
- **Barcode scanning** for packaged foods
- **Usuals, recent meals and one-tap repeat**
- **Custom foods and saved meals**
- **Share meals** as a link
- **Personal targets**, recommended from body, activity and goal, or set manually
- **Calorie rebalancing** after an over-target day
- **Water and supplements** tracking
- **Net energy**: intake against burn
- **Nutrition Tracker**: any date, any range, with averages
- **Flexible day start**, so late meals count to the right day

PROGRESS & BODY

- **Progress dashboard** with body, training, nutrition and energy views
- **Goal ETA** projected from the current trend
- **Weight and six body measurements**, with history editing
- **Custom metrics**: anything else a member wants to track
- **Where the work went**: weekly sets per muscle group
- **120 milestones** across five categories
- **Progress photos**: before/after comparison of photos the coach takes
- **Today's burn breakdown**, every figure labelled measured or estimated
- **Daily health intelligence**: training load and energy, with no wearable needed

COMMUNITY & COMPETITION

- **Gym community** (opt-in): weekly activity, streaks, consistency
- **Leaderboards**: today, this week, this month
- **Activity feed**: share workouts, react, comment, copy
- **Members directory** and following
- **Private friend communities** across gyms, with invites and challenges
- **Tournaments**: enter or host, live scoring, podiums
- **Trophy cabinet** and open tournaments from other gyms

PROFILE, PRIVACY & DATA

- **Profile journey** and goal setup
- **Equipment and coach preferences**, so plans fit real life
- **Message your coach** in-app
- **Account, password, photo, theme and units** (metric or imperial)
- **Privacy controls** for records and feed; health data is never shared
- **Cookie preferences** and clear legal terms
- **Download my data** or delete my account

Client features available with setup

Built and working. Each goes live once the gym, or Barbell's deployment, connects the service shown.

QR join with online payment: scan the gym's code, pay, start	Razorpay payment account (live keys)
Membership page: plan status, online renewal, renewal payments	Razorpay for online renewal; status and dates work without it
Nutrition-label photo scan	An AI vision provider key; without one, the photo is kept and values are typed in
AI estimate for dishes the database can't match	An AI provider key (Groq, Gemini, OpenRouter or Ollama)
Wearables: WHOOP and Oura (workouts, recovery, sleep), plus the recovery panel	WHOOP / Oura developer app credentials
Password reset by email	An email provider (Resend)
Google sign-in for independent members	A Google OAuth client ID

FOR THE GYM OWNER

The Gym Owner dashboard

Everything a trainer can do, across the whole gym, plus memberships, revenue, staff, the gym floor and your own Barbell subscription.

29

owner features, plus every trainer tool, gym-wide

● Available now: included and working ◇ Available with setup: needs a provider account, key or hardware

COMMAND CENTRE

- **Your gym today**: active members, check-ins, money collected and outstanding, with trends for check-ins, revenue, memberships and adherence
- **Needs your attention**: overdue payments, expiring plans, at-risk clients, missing trainers, plus one-click actions

MEMBERS & COACHING

- **All clients**, filtered by trainer, membership and status, sorted by risk or progress
- **Add a client** and assign a trainer
- **Every trainer tool, gym-wide**: client profiles, builders, alerts, reports, messages
- **Tick a client's planned meals** as eaten from their profile

MEMBERSHIPS & REVENUE

- **Business overview**: members, monthly revenue, renewals, overdue, attendance
- **Packages and subscriptions** in a couple of clicks
- **Record payments** (cash, UPI and more) with duplicate protection
- **Members table**: overdue, due and paid; renewal countdowns; suspend, resume, cancel
- **CSV export** of members and payments
- **Payments stay private** to the owner

ANALYTICS

- **Joined vs left, churn, revenue and visits** over 6, 12 or 24 months

TEAM & ATTENDANCE

- **Trainers**: workload, capacity, flagged clients, attendance
- **Attendance roster**: hours as worked or fixed shifts, grace minutes, late flags
- **Rotating QR codes** for arrival and departure, refreshed every 90 seconds
- **Corrections** approved by you, with a full audit trail

THE GYM FLOOR

- **Mark member attendance**: it drives check-ins and the live crowd
- **Gym Crowd Live**: occupancy, arrivals by hour, typical week
- **Crowd controls**: capacity, hours, thresholds and who sees what, enforced on the server

GYM SETTINGS

- **Sign-up code, branding, crowd display**, community and leaderboard switches
- **Client freedom**: Prescribed, Hybrid or Custom, plus substitute, add and edit switches

GROWTH & YOUR BARBELL ACCOUNT

- **Set up your gym** and owner account in minutes
- **Enterprise onboarding wizard**
- **QR onboarding**: one-time codes for new clients (tied to a plan) and trainers
- **Numbered invoices** as downloadable PDFs
- **Host tournaments**: 16 events, live scoring, podiums, gym TV display

PLATFORM

- **One sign-in** for every role; light, dark or system appearance
- **Legal pages and terms acceptance** built in; a **guided live demo** on request

◇ Owner features available with setup

Access control

Doors and turnstiles feed live occupancy, with member mapping, event log, sync, health alerts and audit.

Needs: webhook, REST, CSV or eSSL/ZKTeco (beta) connection. A demo sandbox runs without hardware.

Online payment for your Barbell plan

Packages, upgrades and add-on capacity, paid by card or UPI.

Needs: Razorpay live keys.

Emailed invoices and password resets

Invoices to your accountant; reset links to users.

Needs: an email provider (Resend).

FOR EVERY TRAINER

The Trainer workspace

A focused workspace for each coach: their own roster, every client's real data, the tools to program them, and early warnings when someone starts to slip.

20
trainer features

Every trainer feature works out of the box, with no setup

YOUR DAY

- **Trainer dashboard**: check-in card, clients at risk, adherence trend, today's roster
- **Live gym crowd**, and which of your clients are in
- **My clients**: your roster only, with status, adherence and last activity

CLIENT 360° PROFILE

- **Overview**: adherence score, weight trend, measurements, why they need attention
- **Training**: program week, weekly muscle balance against target ranges, movement patterns
- **Workouts**: full history; assign a session
- **Nutrition**: today's plan, logged food, targets; assign a plan; tick planned meals
- **Photos**: front, side and back, with a before/after slider
- **Membership**: status and 90-day attendance
- **Client analysis**: data-derived insights to accept, modify or dismiss
- **Messages** thread

PROGRAMMING

- **Workout builder**: templates, reorder, rest times, preview, assign on any date
- **Custom exercises** added to the gym's library
- **Weekly programs**: PPL, Upper/Lower, Full Body or custom splits
- **Nutrition builder**: calorie-targeted plans with realistic meals

STAY AHEAD

- **Risk alerts**: plateaus, low protein, missed workouts, missed check-ins and more
- **Weekly reports** generated from real data, sent in one tap
- **Messages** with quick templates and unread counts

YOUR HOURS

- **My attendance**: scan in and out, see your hours, request corrections
- **Join a gym** by scanning its trainer QR

EVENTS

- **Host and score tournaments**, with co-hosts

PART TWO · EXPLORE THE BARBELL EXPERIENCE

The Client experience

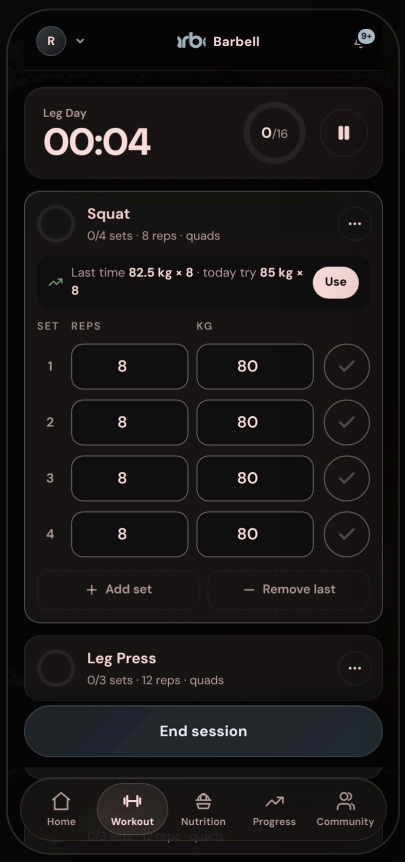

Members don't get a static plan. They get a coach in their pocket that shows the session for today, knows what they lifted last time, understands the food they actually eat, and shows progress in numbers they trust.

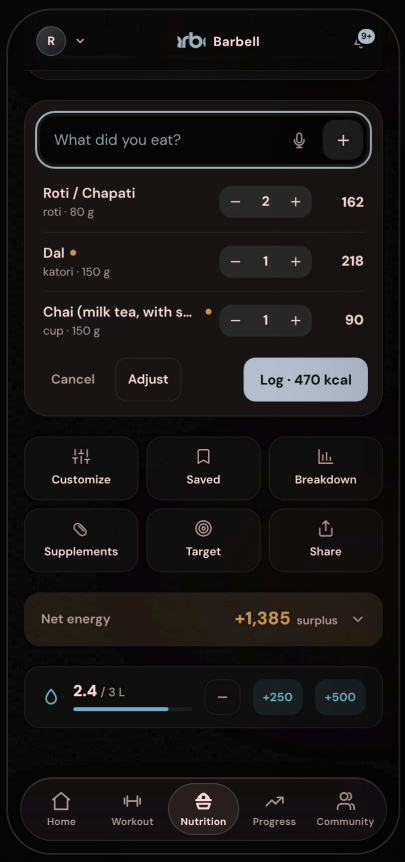

287
exercises in the library

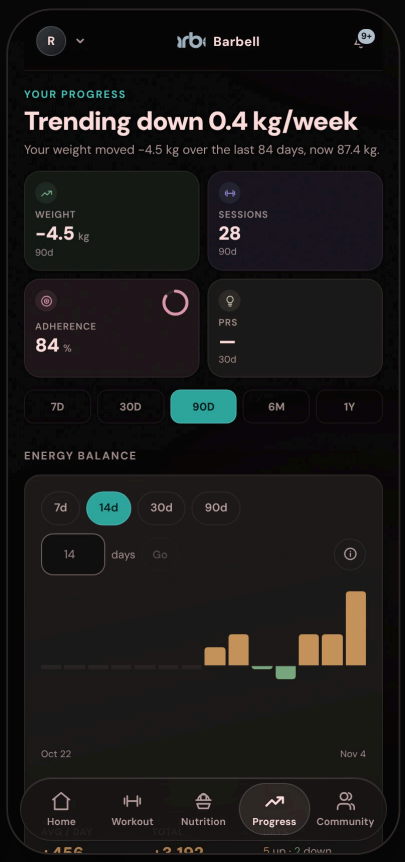

21,000+
foods, including 1,014 Indian dishes

120
milestones to earn

40+
cardio activities and sports

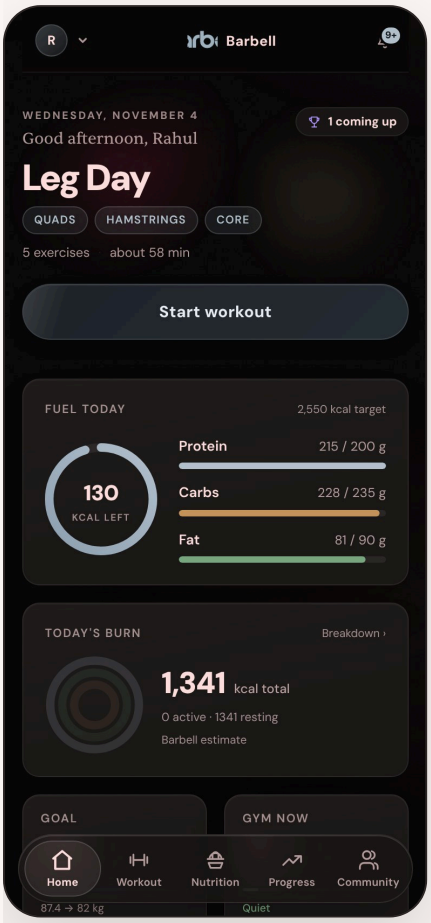

GETTING STARTED · HOME

A personal app from the first minute

Members join the gym's Barbell in seconds. From then on, Home tells them what matters today, and nothing they don't need.

Home. Today's session, fuel and burn, goal progress and the live gym crowd.

Join with the gym's code

New members sign up with the gym's sign-up code and are placed in the right gym automatically. No manual matching by staff.

Onboarding that builds real targets

Six quick questions about the member's body, goal and experience set personal calorie and macro targets instead of a generic average, and progress is measured from their own starting point. Everything can be changed later.

Guided tour

A short walkthrough of the main screens on first use, replayable any time from Help.

Today at a glance

Today's session with its muscle focus and length, calories left with protein, carbs and fat, today's burn, progress toward the goal weight, how busy the gym is right now, and what the gym community has been doing.

A Home that's theirs

Members choose which cards appear and in what order. Cards appear only when they have something to show.

Coach Brief

A daily list of priorities worked out from the member's own logs: over target on calories, short on water, protein reached, today's session done. Each comes with a priority level and a link to act on it. Built on rules, not guesswork, and it needs no AI key.

Reminders that fit the day

The notification bell carries reminders for today's workout, tomorrow's session, an unfinished workout, rest days, meal logging, water at the member's chosen interval, and a daily recap.

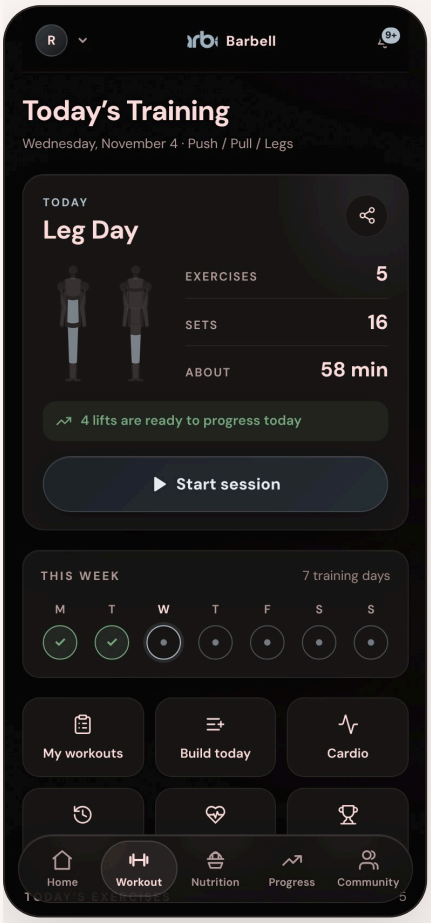

In control of every nudge

Each reminder type can be switched on or off, with a water interval, a recap time and quiet hours. If the member allows it, reminders also appear as device notifications while Barbell is open in a background tab.

TRAINING

Every session planned, logged and progressed

The trainer's program decides what's on today. Barbell remembers every set, so each session builds on the last.

Today's Training. The day's session from the assigned program, with lifts ready to progress.

Today's Training

The member's weekly program serves the right session each day automatically: name, muscle focus, exercises with sets, reps and weight, estimated duration and a this-week strip showing what's done.

Progressive overload, built in

Each lift shows what was done last time and what to try today, for example **"Last time 82.5 kg × 8 · today try 85 kg × 8"**. The session header says how many lifts are ready to progress.

Live workout session

A running timer and a set-by-set log of reps and weight, with one tap to reuse last time's numbers. Members can add or remove sets and add exercises. Progress saves as they go, so a session can be resumed.

Effort and calories, honestly

After a session the member rates the effort. Barbell stores the calories burned as an estimate with a range (for example 221 kcal, 156–286), never as a false precise figure.

Personal records, automatically

Completing a workout detects new records for heaviest weight, estimated one-rep max and best set volume, and shows them in the session recap.

Build today

Where the gym allows it, members build their own session from the exercise library, filtered by muscle group and equipment. It replaces today's session.

My workouts planner

Saved sessions and a personal weekly schedule, with Do today, Edit, Copy and Delete on each.

Log a past workout

Forgot to start the app? Members record the session afterwards with date, start and end time, exercises and effort. Barbell warns if it overlaps another session.

Cardio and sports

40+ activities across gym machines (treadmill, rower, air bike, ski erg), outdoor training and sports such as cricket, badminton, football, kabaddi, yoga and boxing. Run live or log afterwards.

Training history

Every completed and missed session, plus a day view that shows exactly what was trained and eaten on any date.

287-exercise library

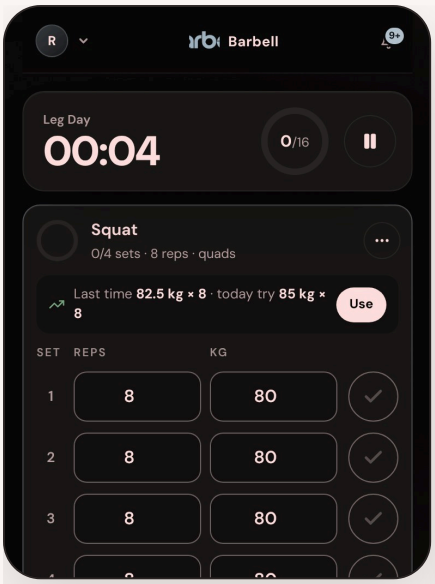

Every exercise tagged with primary and secondary muscles, equipment and difficulty, with an animated exercise visual.

Share a workout

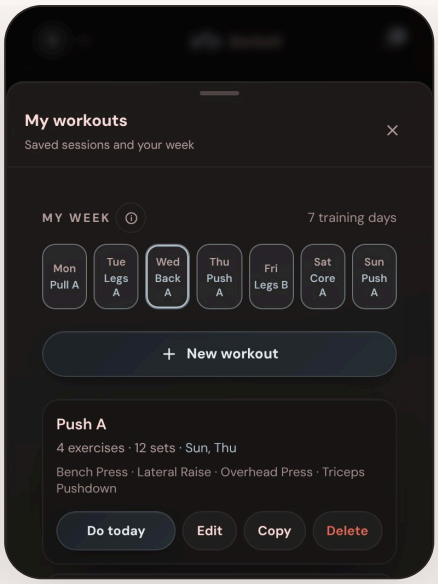

Send any session as a link. Anyone can preview it; a member who signs in imports it to today or to their planner.

My PRs and strength trends

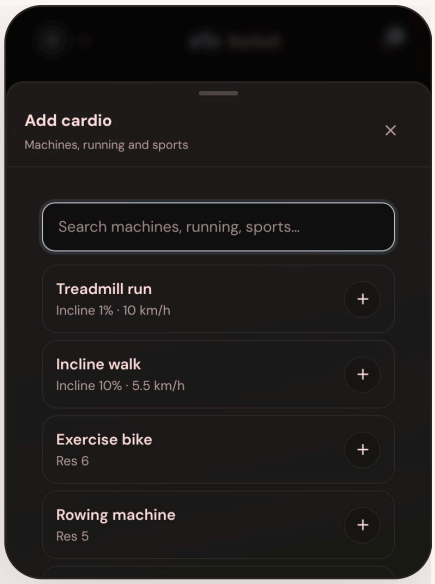

Recent records and a "where your strength is moving" list showing each lift's change over the weeks, for example lateral raise +93.8% in 8 weeks.

Live session. Last time's numbers and today's target.

My workouts. Saved sessions and the member's week.

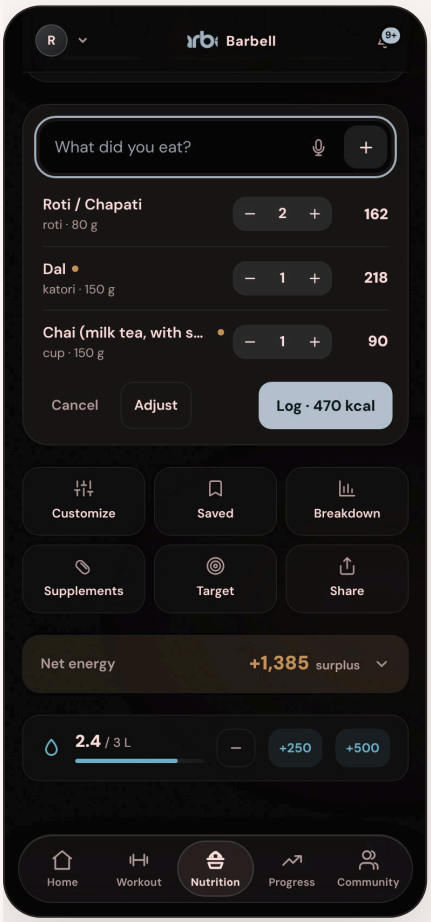

Cardio. Machines, outdoor training and sports.

NUTRITION

Food logging that understands Indian meals

Most food apps struggle with "2 roti, dal and chai". Barbell's food engine knows katoris, rotis and home cooking, and calculates every value from published food-composition data.

Type a meal. "2 roti, dal and chai" becomes three foods, 470 kcal, ready to log.

Today's Fuel

One dial for calories left (or over), with protein, carbs and fat, the day's planned meals and everything logged.

Type a meal in plain words

Members write what they ate the way they'd say it. Barbell splits it into foods, picks a sensible portion (a roti, a katori of dal, a cup of chai) and lets them adjust quantities before logging.

Or say it

A microphone button turns speech into the same meal entry, tuned for Indian English food words. It uses the browser's built-in speech recognition (Chrome, Edge, Safari) and no third-party service.

21,000+ foods, real portions

Search across the Indian Food Composition Tables, 1,014 Indian dishes, USDA and Canadian data and Open Food Facts packaged products. Pick portions in bowls, katoris, pieces or grams, and set the cooking oil from low to high.

Barcode scanning

Scan a packaged product with the camera to get its brand, serving and full nutrition. Lookups check Barbell's own cache and bundled data before the live Open Food Facts database.

Usuals and repeat

Barbell learns what a member usually eats at each meal and keeps recent meals one tap away. Any past meal can be repeated today.

Custom foods and saved meals

Add family recipes with their own macros and units, save regular meals, and log either in one step.

Share meals

Send saved meals and foods as a link; the recipient saves them to their own diet.

Targets that fit the person

Daily calories and macros recommended from metabolic rate, activity and goal, or set by hand.

Calorie rebalancing

After an over-target day, Barbell offers to spread the surplus across the coming days: Easy, Moderate, Aggressive, Intense or Custom. For example, 1,270 kcal over becomes -320 kcal a day for four days, with protein protected.

Water and supplements

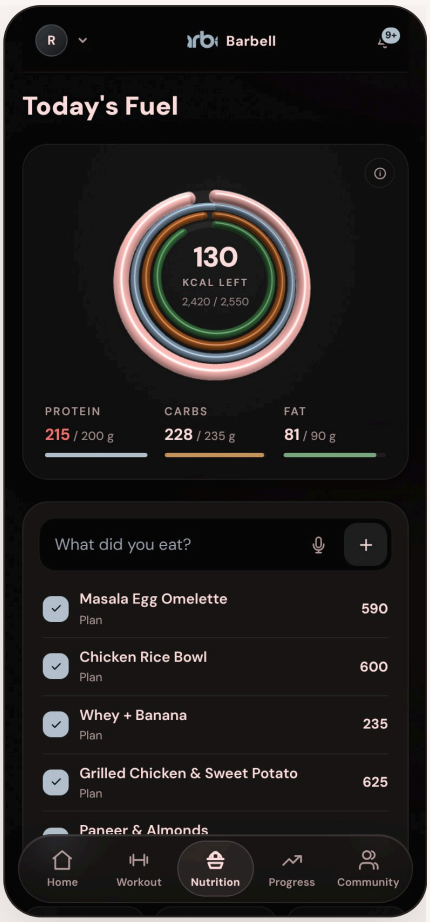

Quick +250 ml / +500 ml water logging against a daily target, and a supplement list with dose and time.

Net energy

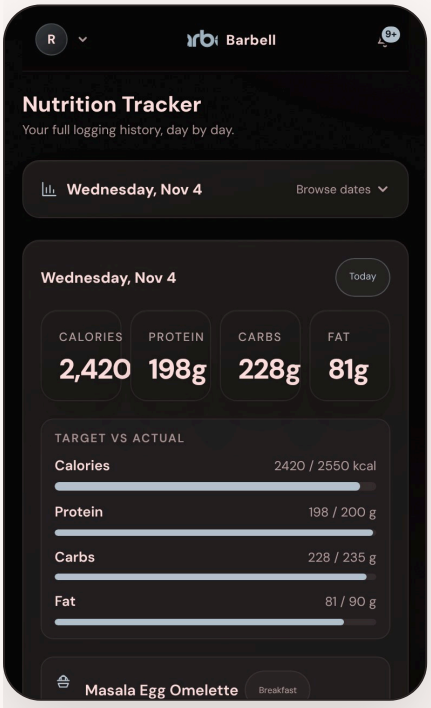

Intake against total burn for the day, with a running energy-balance history.

Nutrition Tracker

Browse any date, compare target and actual, and view 7-day, 30-day, 3-month, 6-month or custom ranges with averages. The day can start at 3–6 am so a late dinner counts to the night it was eaten.

Today's Fuel. Calories left, macros and the day's plan.

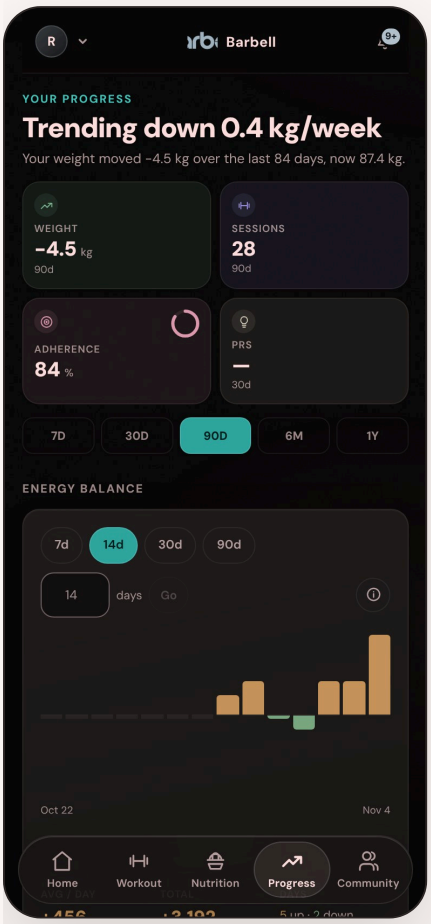

Nutrition Tracker. Target against actual for any day.

Numbers members can rely on. Portions and nutrition values come from Barbell's food engine, which matches each food against published food-composition data (the Indian Food Composition Tables, the Indian dish database, USDA and Open Food Facts) and weighs portions by each food's own serving size. Where a portion is converted or approximate, it is labelled as an estimate rather than shown as exact.

PROGRESS & BODY

Progress members can see and trust

Clear trends, honest estimates and milestones that reward consistency, not just results.

Progress. Weight trend, sessions, adherence and energy balance.

Progress dashboard

A plain-language headline ("Trending down 0.4 kg/week"), weight change, sessions, adherence and records over 7 days to 1 year.

Explore your data

Body, Training, Nutrition and Energy views, each comparable with the previous period. Touch any chart to read a day.

Goal ETA

"About 13 weeks from your target", projected from the current trend and labelled as an estimate, not a promise.

Weight and measurements

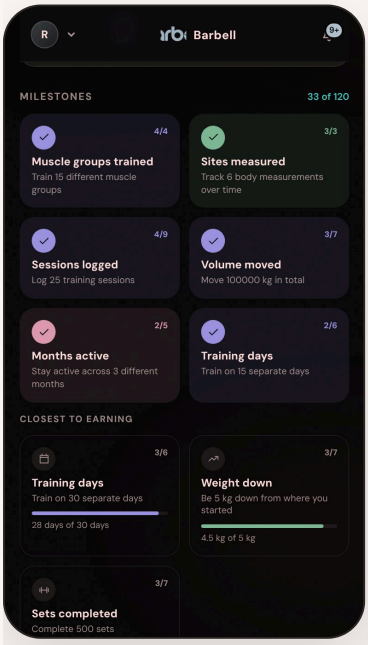

Weight feeds straight into the trend and goal. Waist, chest, arms, thighs, hips and neck can be back-dated, corrected or deleted, and readings far outside the normal range are flagged before saving.

Custom metrics

Resting heart rate, steps, a lift to watch: members track anything else with its own unit and target.

Where the work went

Total volume and sets per muscle group, so members see what they're actually training.

Milestones. 120 to earn; the closest ones highlighted.

Strength trends. Each lift's change over the weeks.

120 milestones

Five categories (Training, Strength, Consistency, Nutrition and Body), each with progressive levels and a "closest to earning" shortlist.

Progress photos

Front, side and back photos taken by the coach appear on Progress as a before/after comparison, with the days between them.

Today's burn, explained

Resting energy, workouts and cardio, each labelled with its source and whether it was measured or estimated.

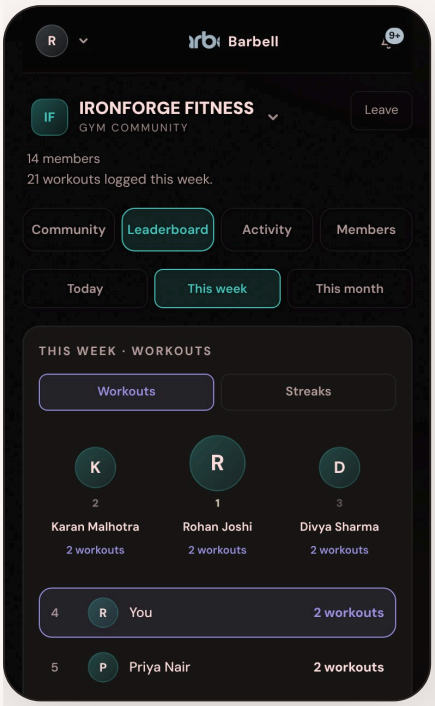

Daily health intelligence

Logged workouts and the member's profile combine into daily energy and training-load figures. It works with no wearable and never double-counts energy across sources.

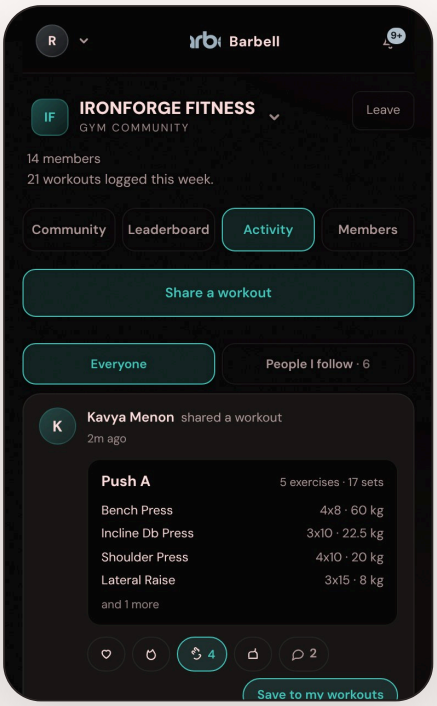

COMMUNITY & COMPETITION

A gym community that keeps people coming back

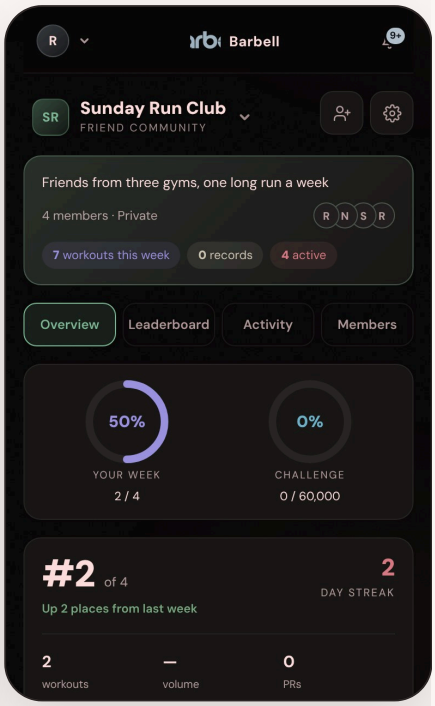

Optional and private by default. Members share only what they choose, and weight, food, sleep and health data are never shared.

Leaderboards. This week's workouts.

Activity. Shared workouts with reactions.

Friend community. Across gyms.

Gym community

Members opt in and see who was active today, workouts and records this week, their streak, weekly consistency and a community activity calendar.

Activity feed

Share a finished workout, react with fire, strong, clap or like, comment, and copy anyone's shared workout into your own planner. Show everyone, or only people you follow.

Private friend communities

Train with friends at other gyms, or no gym at all. Create an invite-only community with its own colour and mark, invite by code or link, and compete on leaderboards and challenges for workouts, volume or records.

Leaderboards

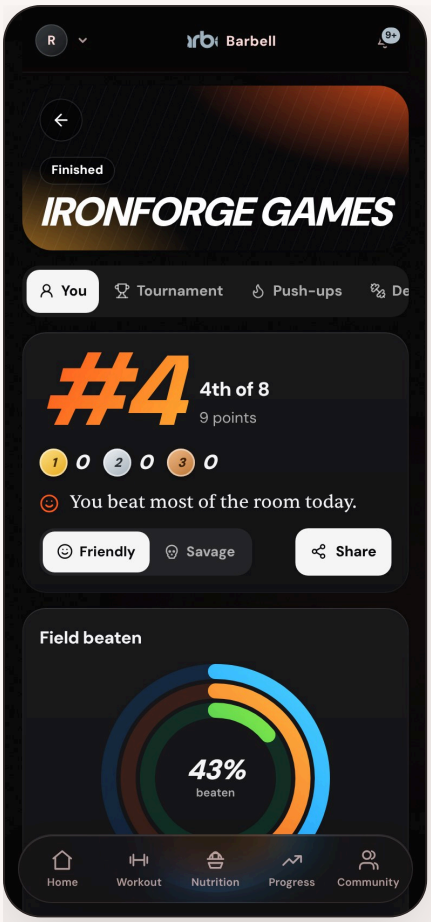

Today, this week or this month, ranked by workouts or streaks. The owner can turn leaderboards off.

Members and following

A members directory with follow, which shapes the feed and who can see a member's records.

Privacy controls

Members choose who sees their personal records (everyone at the gym, only followers, or nobody) and what their feed shows.

Tournament results. Placing, points and the field beaten.

Tournaments for every member

Enter a gym's tournament from the app, by code or by scanning its QR. Anyone with the link can follow the public tournament page.

Host one yourself

Any member can host: name it, pick events, set the venue and prize, invite people. Hosts record scores live and rankings update instantly.

Podiums and points

Results show each event's ranking, an overall podium (10, 7, 5, 4, 3, 2, 1 points by place), gold, silver and bronze, and gym-versus-gym standings.

Trophy cabinet

Every member has a username and a cabinet of tournaments played, medals and titles. They can choose to appear in search so hosts at other gyms can invite them.

Discover

Live, upcoming and finished tournaments from the member's gym, plus open ones from other gyms.

PROFILE, PRIVACY & DATA

Personal, private and under the member's control

Profile and goals

A journey card (start, now, target, percentage of the way) and goal setup: goal type, target weight and date, experience and body details.

My equipment

Nine equipment types, from barbell and cables to bands and bodyweight, so plans use what's actually available.

Coach preferences

When they train, how long a session can be, what kit they have, foods they actually eat, exercises to avoid, and anything else worth knowing, such as injuries or travel.

Message your coach

A direct thread with the trainer from the Profile page; replies arrive in the notification bell.

Account and display

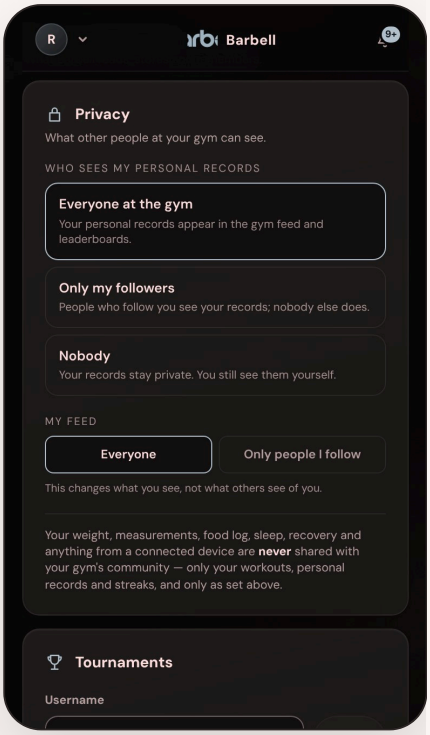

Name, phone and profile photo; a password change that requires the current password; system, light or dark appearance; metric or imperial units, which change only the display, never the data.

Cookies and terms

Essential cookies only by default, with preferences, analytics and marketing off until the member turns them on. Terms are accepted at first sign-in.

Download or delete

One tap downloads everything (profile, workouts, food, measurements, payments, devices) as a single file. Members can permanently delete their account by typing their email to confirm.

Settings. Privacy choices and tournament identity.

Client features available with setup

Join by QR, with online payment

Scan the owner's one-time code, see the gym and plan, pay, start immediately.

Needs: Razorpay live keys. Until then, members join by sign-up code and the owner records payment.

Membership page

Plan, real status (active, expiring, lapsed), dates and renewal payments.

Status and dates work as is; online renewal needs Razorpay.

WHOOP and Oura

Workouts, energy, heart rate, sleep and recovery, plus a recovery panel comparing training and rest days.

Needs: WHOOP / Oura developer credentials. WHOOP is verified against a live account.

Nutrition-label scan

Photograph a label and the values are read for review.

Needs: an AI vision key. Without one, values are typed in.

AI estimate for unmatched dishes

Clearly labelled as an estimate; Barbell never invents values.

Needs: Groq, Gemini, OpenRouter or Ollama.

Password reset email · Google sign-in

Reset links by email; one-tap sign-in for independent members.

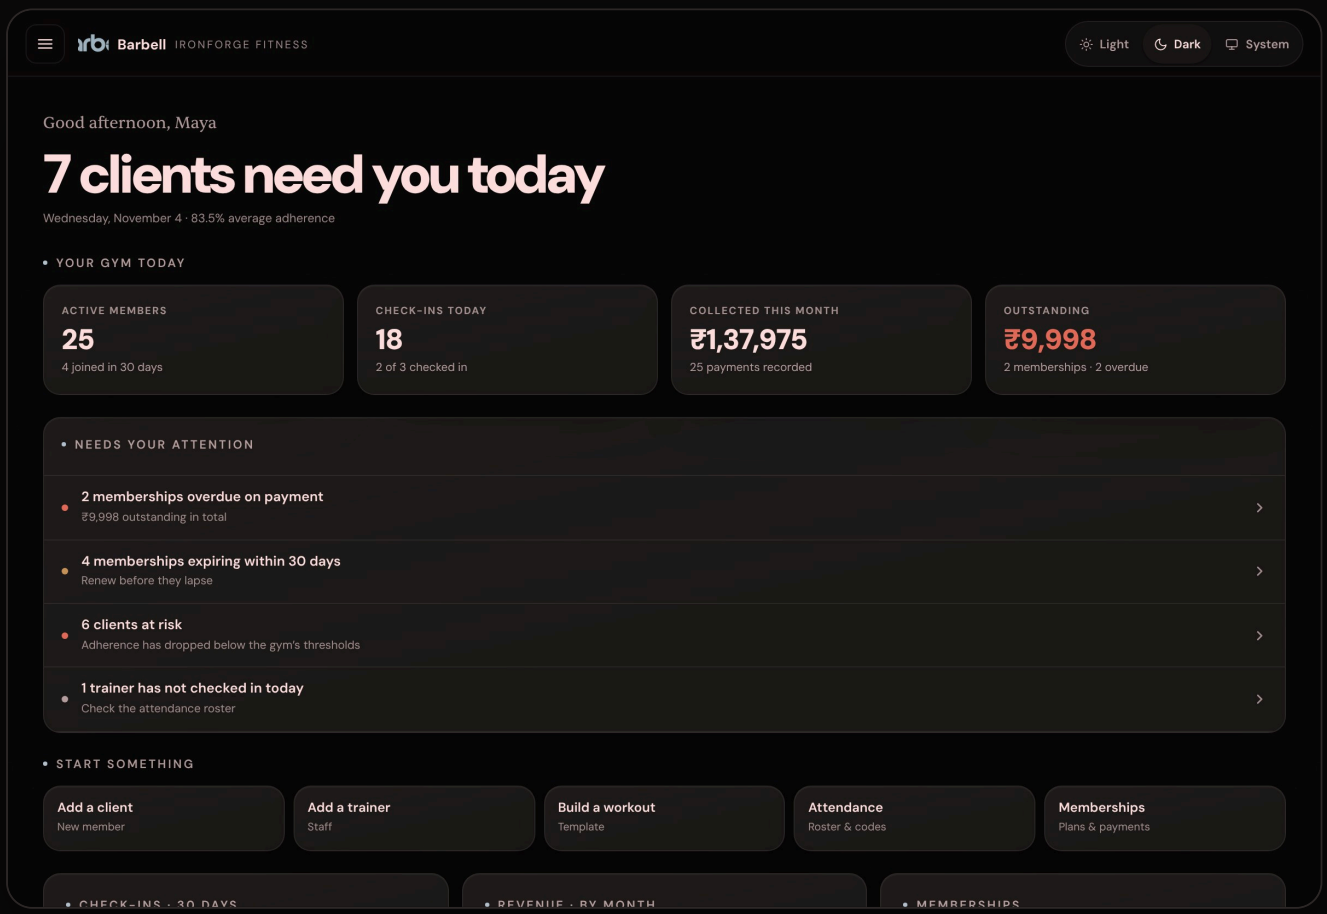

Needs: Resend email; a Google OAuth client ID.

PART TWO · EXPLORE THE BARBELL EXPERIENCE

The Gym Owner experience

One dashboard that answers the questions owners ask every morning: who needs attention, what's owed, who's renewing, which trainers are in, how busy the floor is. And every coaching tool, across the whole gym.

1	90 s	5	16
dashboard for members, money, staff and floor	attendance codes that can't be reused from a screenshot	ways to connect door and turnstile systems	tournament events, plus your own

COMMAND CENTRE

Know what needs you before you ask

The owner dashboard turns live gym data into a short list of things to act on today.

Your gym today

Active members and new joins, today's check-ins and how many trainers are in, money collected this month, and the amount outstanding with how many memberships are overdue.

Needs your attention

Overdue payments, memberships expiring within 30 days, clients whose adherence has dropped below the gym's thresholds, and trainers who haven't checked in. Each opens the right screen.

Start something

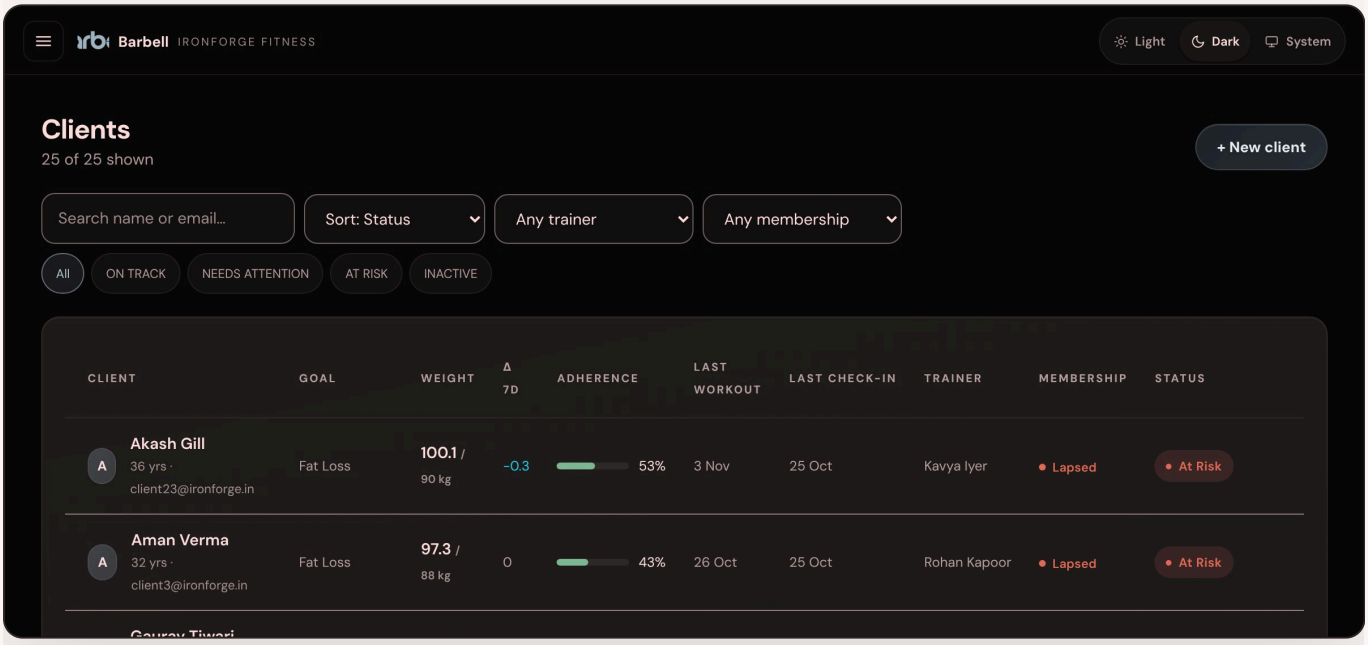

One-click shortcuts to add a client or trainer, build a workout, open attendance or manage memberships.

Trends and member health

30-day check-ins, revenue by month, membership mix (active, lapsed, overdue), a 14-day adherence trend, where adherence comes from (workouts or nutrition), and how many members are on track, need attention or are at risk.

MEMBERS & COACHING

Every client, every trainer, one list

All clients. Goal, weight against target, 7-day change, adherence, last workout and check-in, trainer, membership and status.

All clients

Filter by trainer (or no trainer), membership state (payment outstanding, expiring in 30 days, none) and status (on track, needs attention, at risk, inactive). Sort by status, name, adherence or weight change.

Add a client

Create the member's account with goal, body details and target, and assign their trainer in the same step.

Every trainer tool, gym-wide

Owners can open any client's 360° profile, build and assign workouts, programs and nutrition plans, work the alert queue, send weekly reports and message any member. See the Trainer experience for details.

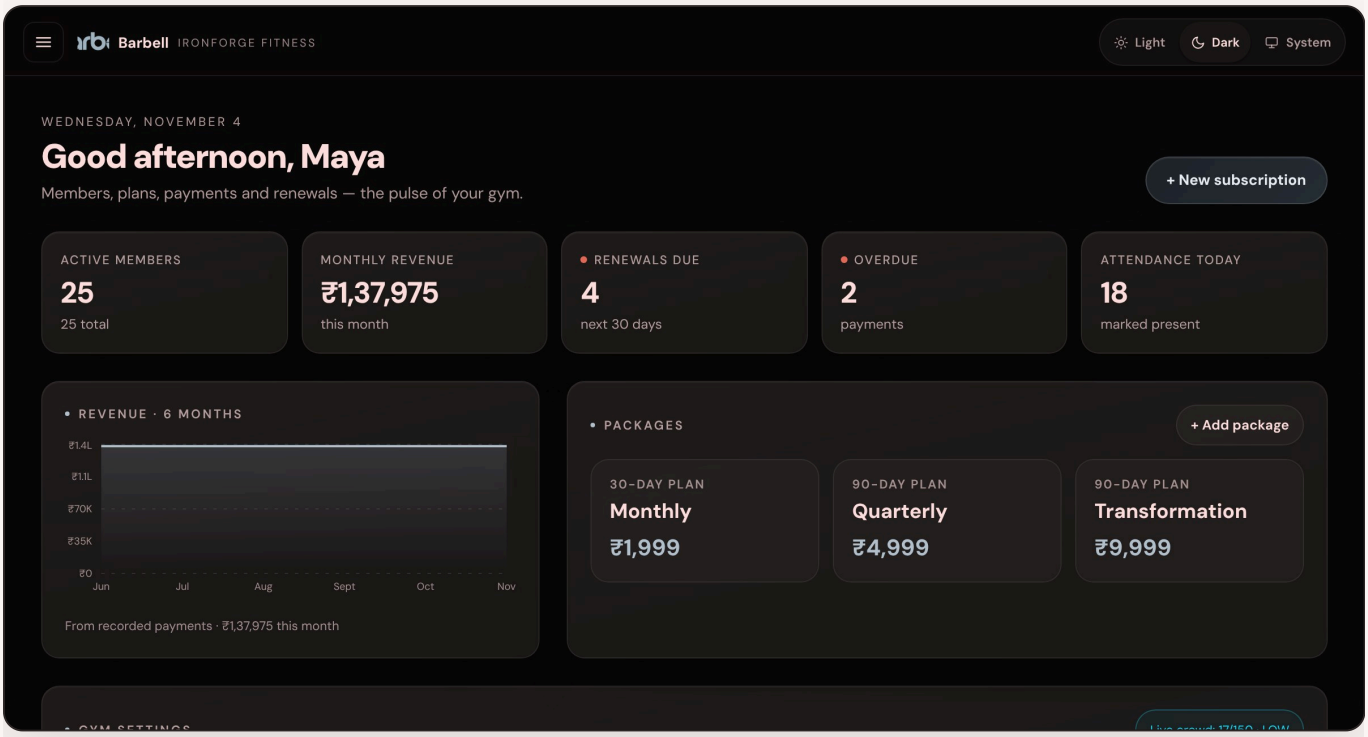

Tick planned meals

From a client's Nutrition tab, staff can mark the day's planned meals as eaten, or un-mark them, on the member's behalf.

MEMBERSHIPS & REVENUE

The business side, without a spreadsheet

Plans, payments and renewals in the same system your members train in, so status is always current.

Business. Members, revenue, renewals, packages and gym settings.

Business overview

Active members, monthly revenue, renewals due in the next 30 days, overdue payments, today's attendance and a six-month revenue chart from recorded payments.

Record payments

Cash, UPI or any method. An identical payment recorded moments earlier is caught, so nothing is entered twice by accident.

CSV export

Members (plan, dates, payment and membership state, trainer) and payments (date, member, amount, method, status, reference) export for your accountant.

Packages and subscriptions

Create membership packages with a price and period (monthly, quarterly, transformation or anything else), then put a member on one. The first payment is recorded with it.

Members table

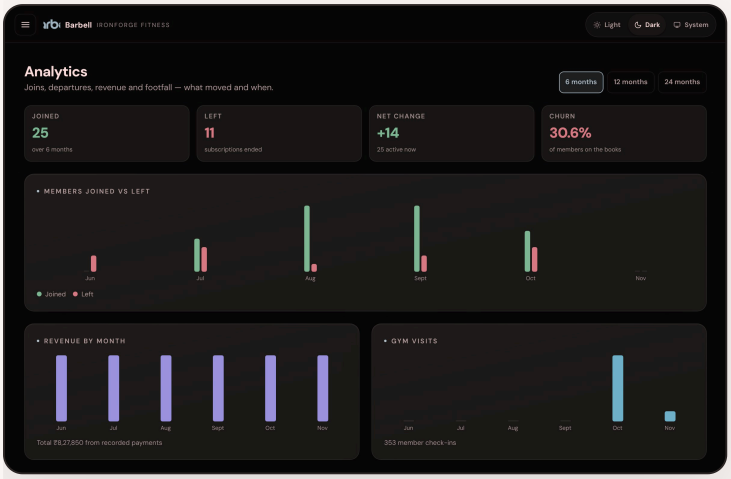

Filter overdue, due or paid; sort by name, renewal date or payment status; see days until renewal or how long overdue; and suspend, resume or cancel a membership in place.

Payments stay private

Trainers see a client's membership status and attendance, but payment history is visible to the owner only.

ANALYTICS

What moved, and when

Analytics. Joins, departures, revenue and visits.

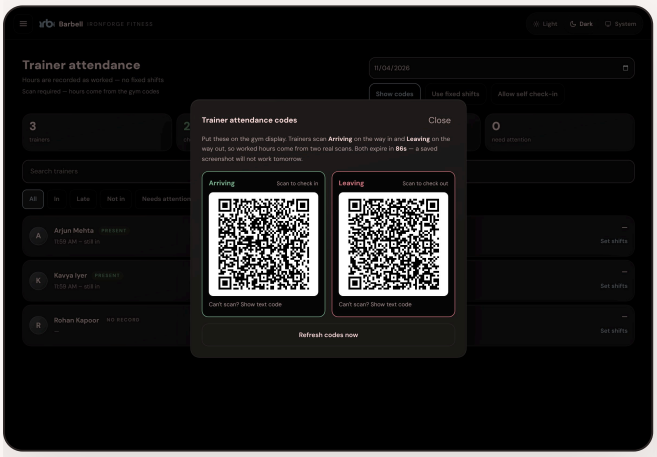

Growth and churn

Members joined and left over 6, 12 or 24 months, net change, churn rate, revenue by month and gym visits, with totals.

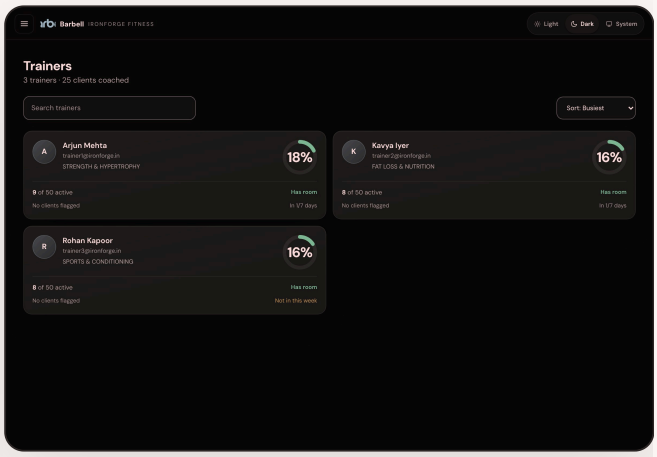

TEAM & ATTENDANCE

Trainer hours you can trust

Hours come from two real scans at the gym, not a button pressed from home.

Attendance codes. Arriving and Leaving QR codes for the gym display.

Trainers. Workload, capacity and attendance at a glance.

Trainers

Each trainer's speciality, workload as a share of capacity, active clients against their limit, whether any clients are flagged, and whether they've been in this week. Sort by busiest, most clients or name.

Attendance roster

Who is in, late, not in or needs attention today. Record hours as worked, or set fixed shifts per trainer with grace minutes for lateness. Require a scan, or allow self check-in for small teams.

Rotating QR codes

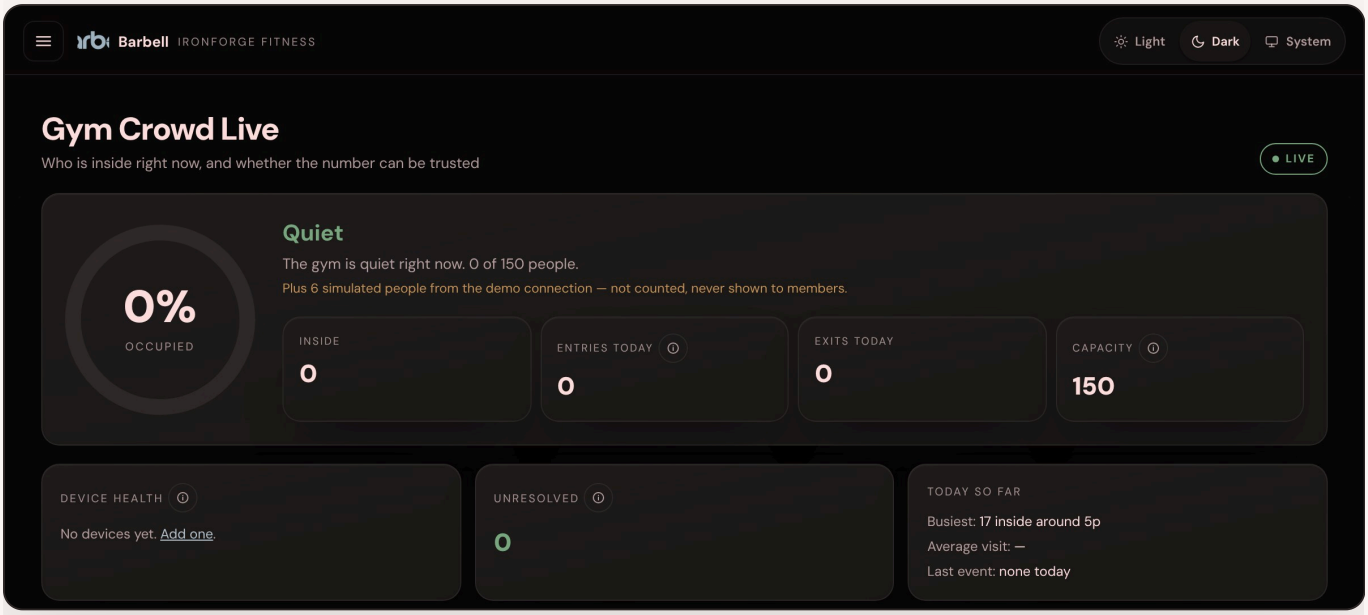

Show Arriving and Leaving codes on the gym display. They refresh every 90 seconds, so a saved screenshot won't work tomorrow. A text code is available as a fallback.

Corrections with an audit trail

Trainers request corrections for a missed scan; you approve or reject them. Every record keeps a full before-and-after history.

THE GYM FLOOR

How busy is the gym, right now?

Gym Crowd Live. Occupancy, entries and exits, arrivals by hour. Demo-connection entries are always counted separately from real ones.

Member attendance

Mark members present at the desk. It feeds today's check-ins, member attendance history and the live crowd count, with no hardware needed.

Crowd controls

Set capacity, opening hours and the quiet, moderate and busy thresholds. Choose whether members and trainers see the crowd card and the exact head-count. These choices are enforced on the server.

Gym Crowd Live

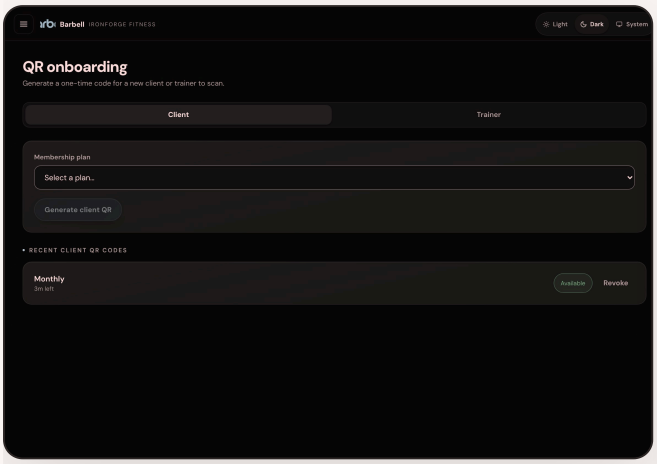

Occupancy against capacity, entries and exits today, busiest hour, average visit, arrivals by hour compared with yesterday, a typical week once seven days of data exist, and who is inside.

Gym settings

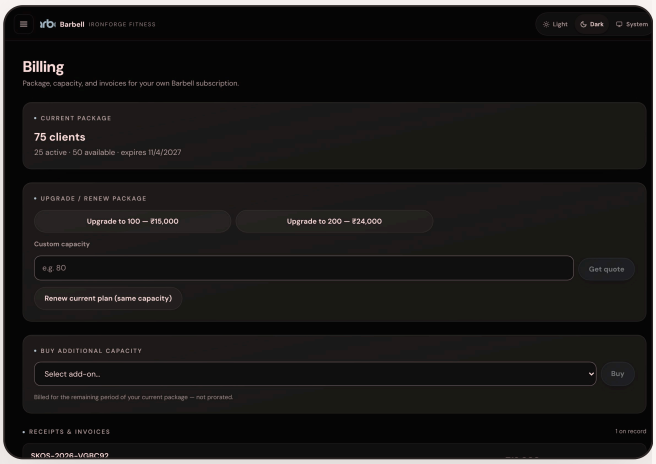

The client sign-up code, branding, the live-crowd display, community and leaderboard switches, and how much members may change: Prescribed, Hybrid or Custom, plus whether they may substitute exercises, add exercises or edit sets, reps and weights.

GROWTH & YOUR BARBELL ACCOUNT

Onboard people in seconds; manage your plan in one place

QR onboarding. One-time codes for clients and trainers.

Billing. Package, upgrades, add-on capacity and invoices.

Set up your gym

Create the gym and owner account with contact details, city and address. The gym is ready for trainers and members straight away.

QR onboarding

Generate a one-time code tied to a membership plan for a new client, or a code for a new trainer. Codes check available capacity, can be revoked, and are listed with their status.

Host tournaments

A five-step wizard: name, tagline, colours, venue and prize, then events from 16 built-in competitions (reps, holds, heaviest lift with attempts, distance, sprint and row times, team tug-of-war and relay) or your own. Keep it in-gym or open it to every gym. Add co-hosts, rotate codes and see a full audit log.

Enterprise onboarding

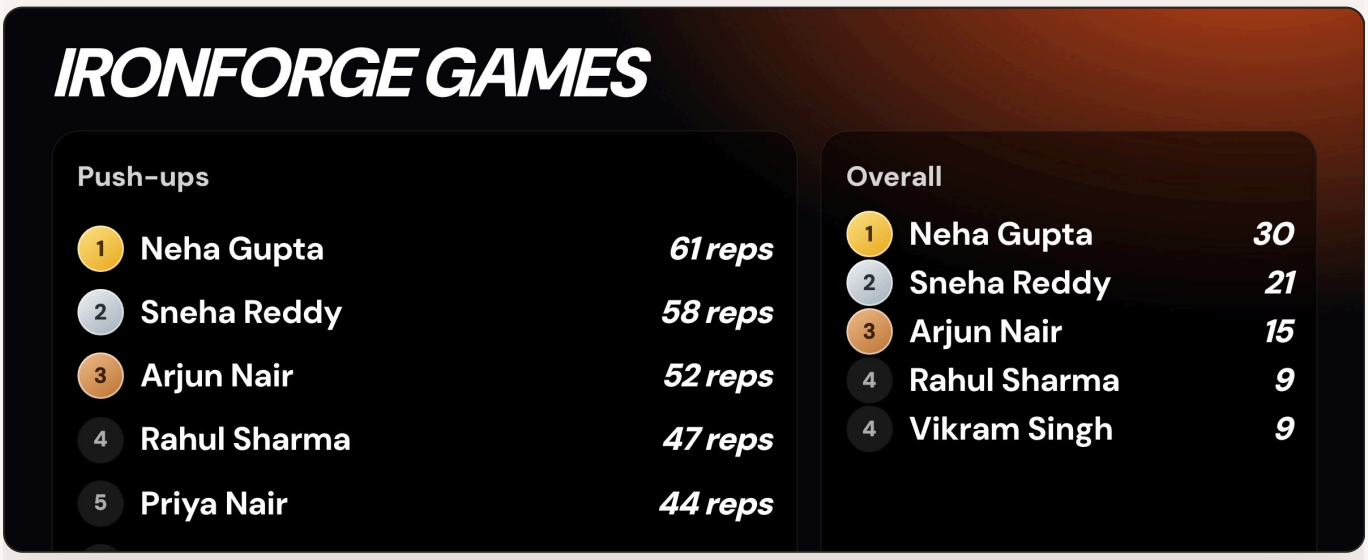

A five-step wizard captures gym type, size, team, branches and billing habits so the plan matches the business.

Invoices

Every payment for your Barbell subscription is receipted automatically with a numbered invoice, downloadable as a PDF.

Live scoring and the big screen

Hosts record results as they happen and rankings update immediately. A big-screen mode puts live standings and a scan-to-follow code on the gym TV. Results finish with podiums, points and gym-versus-gym standings.

Big-screen mode. Live event standings and the overall table, with a scan-to-follow code.

PLATFORM

Built for real gyms

One sign-in, three roles

Owners, trainers and members use the same sign-in with clear paths: set up a new gym, join a gym ecosystem, or train independently.

Light, dark or system

Every screen is designed in both themes and follows each user's choice.

Legal pages and consent

About, Contact, Terms, Privacy, Refund and Shipping pages ship with the product, and users accept terms at first sign-in.

See it live

Request a guided demo and the Barbell team prepares a ready-to-walk-through live gym with real data, available for 30 minutes.

Owner features available with setup

Built and working. Each connects to a system outside Barbell.

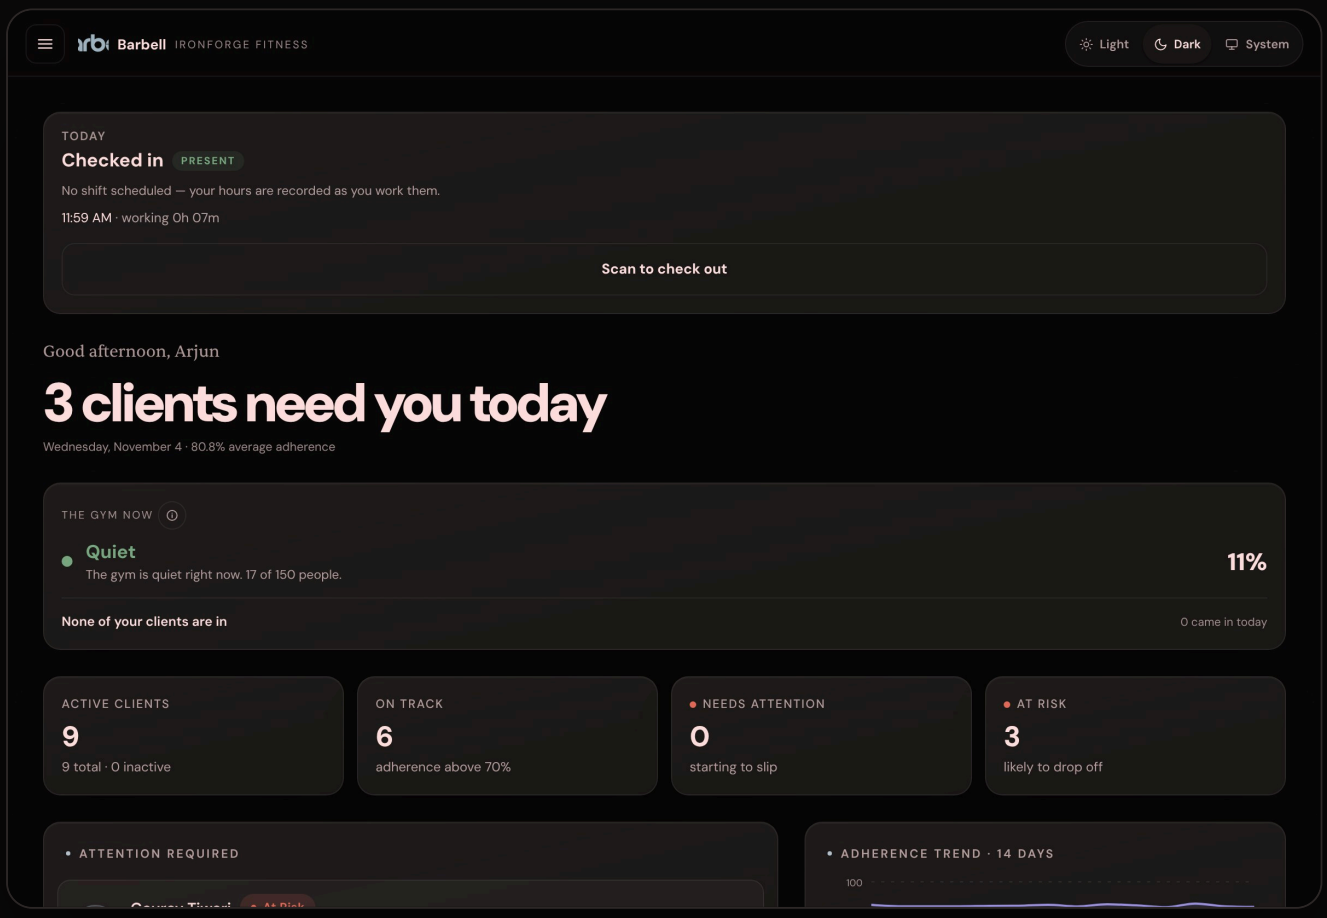

Access control: connect a door, turnstile or attendance system and Barbell tracks who is inside. Map members to cards or PINs, browse every entry with its outcome (counted, duplicate, unrecognised, rejected), run syncs and imports, and get health alerts such as "a member with a lapsed membership may still open the door". Every action is in the audit log. Biometric data never leaves the device.	A supported connection: **Webhook** (HMAC-signed, any system that can post events), **REST polling**, **CSV import**, or an **eSSL / ZKTeco terminal** over ADMS (beta). A **demo sandbox** runs with no hardware, and its events never mix with real ones.
Pay for your Barbell plan online: 75, 100 or 200-client annual packages, custom capacity quotes, add-on capacity and renewals. Capacity used and available is always shown.	Razorpay live keys. Quotes, orders and activation are complete; card checkout goes live with the keys.
Email invoices to your accountant, and password-reset emails.	An email provider (Resend). PDF download works without one.

PART TWO · EXPLORE THE BARBELL EXPERIENCE

The Trainer experience

Trainers see what their clients actually did, not what they said they did. Every workout, meal, weigh-in and check-in lands in one profile, with alerts when someone starts to slip and the tools to respond.

8	8	1 tap	0
views in every client profile	program splits, from PPL to custom	to send a data-backed weekly report	setup: every trainer feature works out of the box

YOUR DAY

Start the shift knowing who needs you

Trainer dashboard

Today's check-in card with **Scan to check in**; how many clients need attention and why; active, on-track, slipping and at-risk counts; a 14-day adherence trend; today's roster with sessions done and completion; and the average weight change this week.

The gym, right now

The live crowd level, and whether any of the trainer's own clients are in today.

My clients

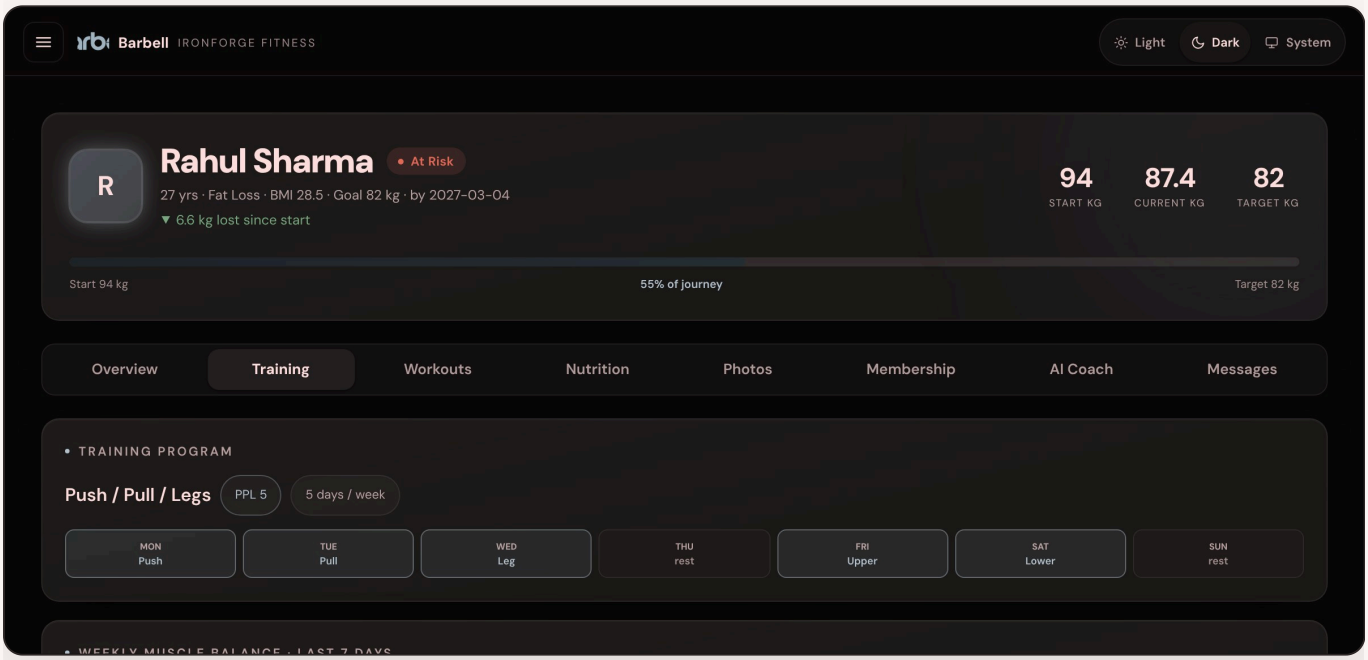

The trainer's own roster, with goal, weight against target, 7-day change, adherence, last workout and check-in, membership and status. Filter and sort like the owner's view. New clients a trainer adds are assigned to them.

Join a gym by QR

A trainer signs up, scans the gym's one-time trainer code, and is on the team.

CLIENT 360° PROFILE

Everything about a client, in eight views

Training view. The client's program week and weekly muscle balance against target ranges.

Overview

Adherence score and 7-day score, weight trend over time, recent measurements, and a plain-language "why this client needs attention" panel.

Training

The active program week, then weekly muscle balance: sets per muscle against a target range, marked high, balanced or undertrained, plus movement patterns.

Workouts

Every assigned and completed session with its status, and Assign workout for a chosen date.

Nutrition

Today's planned meals and what was actually logged, plan targets, a 30-day history, and Assign plan.

Photos

Upload front, side and back photos. A before/after slider compares them, and the client sees them on their Progress page.

Client analysis

One click analyses the client's recorded data and proposes an insight with a recommended action, such as the next progression target. The trainer accepts, modifies or dismisses it. Every insight comes only from measured, calculated or estimated data.

Membership

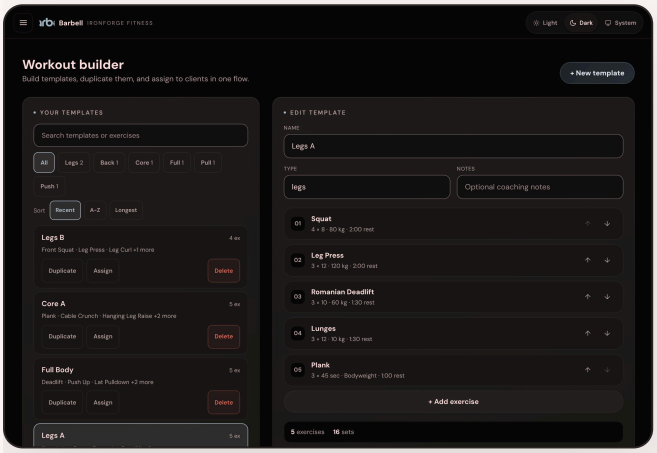

Plan and real status (for example lapsed and how long ago), plus attendance over the last 90 days and the last visit.

Messages

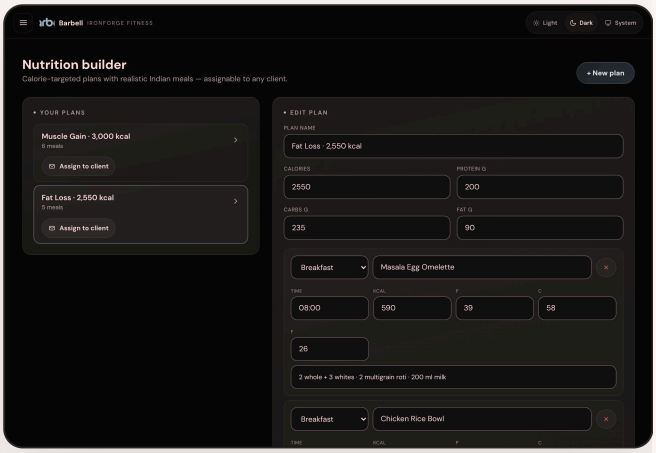

The conversation with the client, right inside their profile.

PROGRAMMING

Build once, assign in seconds

Workout builder. Templates, exercises, sets × reps · weight · rest.

Nutrition builder. Calorie-targeted plans, meal by meal.

Workout builder

Templates filtered by type and sorted by recent, A–Z or longest. Add exercises with sets, reps, weight and rest; reorder them; preview with a 3D muscle body; duplicate a template; assign it to a client on any date.

Weekly programs

Push/Pull/Legs (3 to 6 days), Upper/Lower, Full Body (2 or 3 days) or custom. Map each day to a template and the client's Workout page serves the right session every day, automatically.

Custom exercises

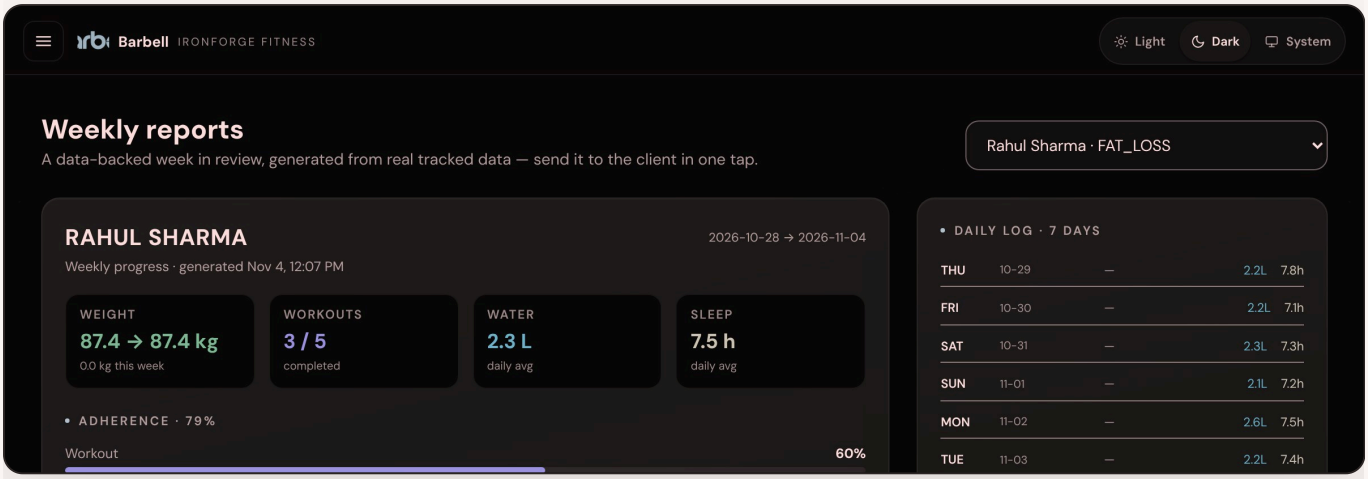

Add exercises the library doesn't have; they become part of the gym's own library.

Nutrition builder

Plans with calorie and macro targets and meals for each slot, from breakfast to before bed, each with time, calories and macros, using realistic Indian meals. Assign to any client.

STAY AHEAD

Catch the drop-off before it happens

Weekly report. Weight, workouts, adherence breakdown, coach summary and next-week action, ready to send.

Risk alerts

Signals detected from real client data: weight plateau, protein below 70% of target, no workout for several days, low workout adherence, missed weekly check-in, low nutrition adherence and inactivity. Each has a severity and an explanation with the numbers behind it, and can be marked read, followed up or dismissed. Alerts are shared across the gym's coaching team, and each one names whose client it is.

Weekly reports

A week in review generated from tracked data: weight change, workouts completed, water, an adherence breakdown, a coach summary, a next-week action and a 7-day log. **Send to client** delivers it to their notification bell and message thread.

Messages

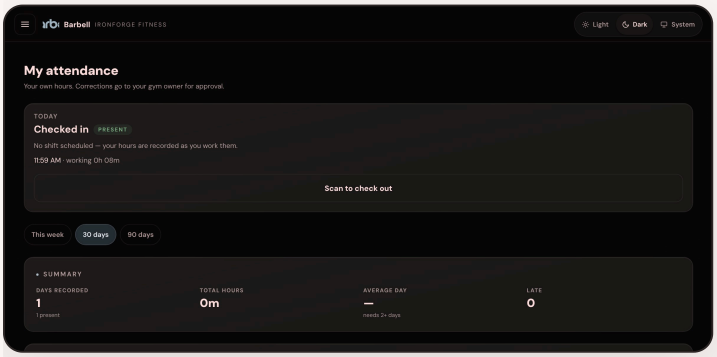

A direct line to each client, with quick templates for workout updates, nutrition updates and check-in reminders, and unread counts per client.

Tick planned meals

Mark a client's planned meals as eaten from their Nutrition view, for example after a check-in conversation.

YOUR HOURS & EVENTS

Your own record, kept straight

My attendance. Today's status, totals and every recorded day.

My attendance

Scan the gym's Arriving and Leaving codes; see this week's, 30-day or 90-day days present, total hours, average day and late count. Missed a scan? Request a correction and the owner approves it.

Tournaments

Trainers host and score tournaments just like owners, and can be added as co-hosts to run events live.

About this catalogue. Every trainer feature works out of the box, with no provider accounts, keys or hardware. Every feature described here was verified in the running product (Barbell **main** @ 643e19f, November 2026) and maps to an entry in *BARBELL_Feature_Audit.md*. Screens are unedited screenshots of the app running on demonstration data for a sample gym, "IRONFORGE FITNESS"; names and figures are illustrative. Features marked "Available with setup" are built and tested and need the named service to go live. Features still in development are not listed.
